- Ecospirulina

ALGAENERGY

AlgaEnergy began the development of agricultural biostimulants based on microalgae in 2009, a world first. The immense biodiversity offered by microalgae, as well as its knowledge and the 5 cultivation technologies available to the company, allow it to choose the ideal species of microalgae depending on the product to be produced.

ALGAENERGY COSMETICS

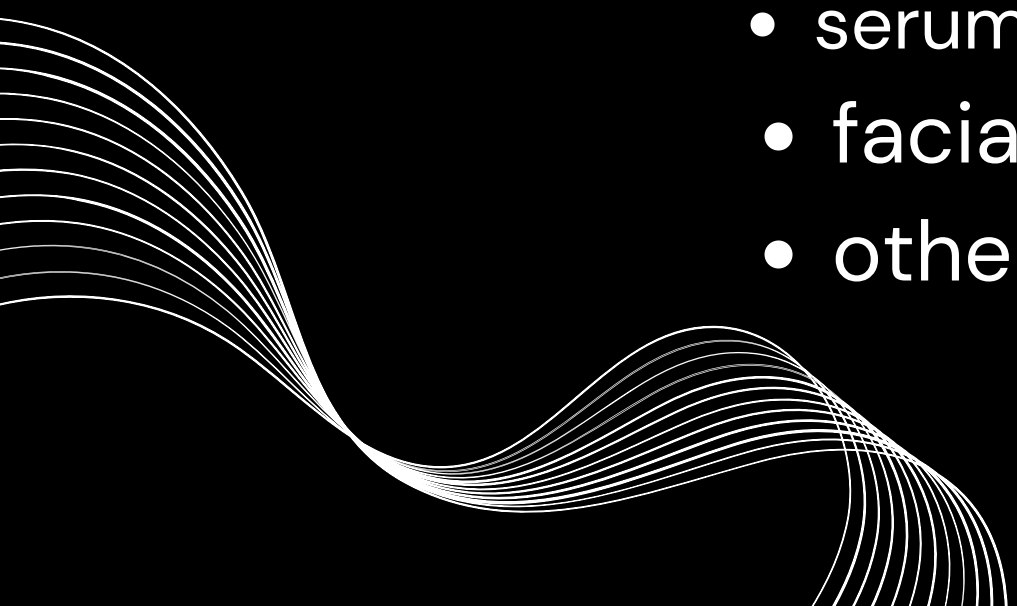

MAREVITAE

microalgae biotechnology

AlgaEnergy has developed its own extract registered under the name Plankton7[®], which combines the main active compounds of seven very different species of microalgae, each one providing its added value.

The MareVitae[®] range includes products such as:

- ultra-hydrating day creams with SPF (for different skin types)
- nourishing night creams
- eye contour creams
- serums
- facial masks
- others

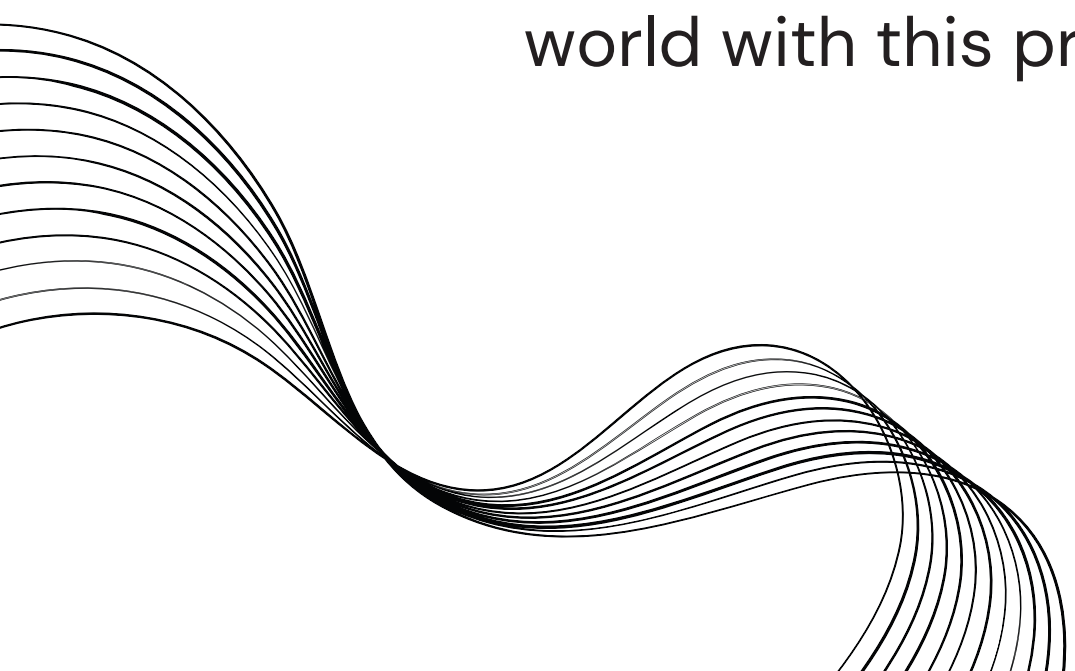

ALGAENERGY AGRICULTURE

Certified:

- ✓ Good for the environment
- ✓ Good for your profitability

Each biostimulant in the AgriAlgae® range is made with an optimized combination of different species of microalgae, in an optimized proportion based on their composition, each one providing essential elements for plant physiological development. Certification of AlgaEnergy biostimulants as one of the 1,000 solutions in the world that contribute to protecting the environment, in addition to providing economic profitability to the farmer. AlgaEnergy biostimulants are the only biostimulants in the world with this prestigious certification.

NEOALGAE

Neoalgae was born on 2012 under the stimulating challenge of contributing to the nutrition and health of people and animals through the inexhaustible potential that microalgae offer us and their application in areas as diverse as food, nutricosmetics and health.

NEOALGAE COSMETICS

Properties:

- stimulation, heal and regeneration of cells
- delay the aging process
- increase the elasticity of the skin
- elimination of impurities
- stimulation of cellular metabolism
- powerful anti-radicals and protectors against the damage caused by UV rays

Spirulina oil

Plankton extract

NEOALGAE AGRO

Spiragro, biostimulants from microalgae suitable for organic farming.
Increases the growth of plants and the quality of their fruits.
Protective effect against parasites and fungal diseases.

Equialgae is a supplement that combines yeast, microalgae and turmeric to provide essential nutrients in the diet of domestic horses.

NEOALGAE NUTRITION

Olive oil
extra virgin with plankton

Organic vegetable creams
enriched with microalgae

Food supplements for
humans and animal feed
based on microalgae

Ecospirulina®

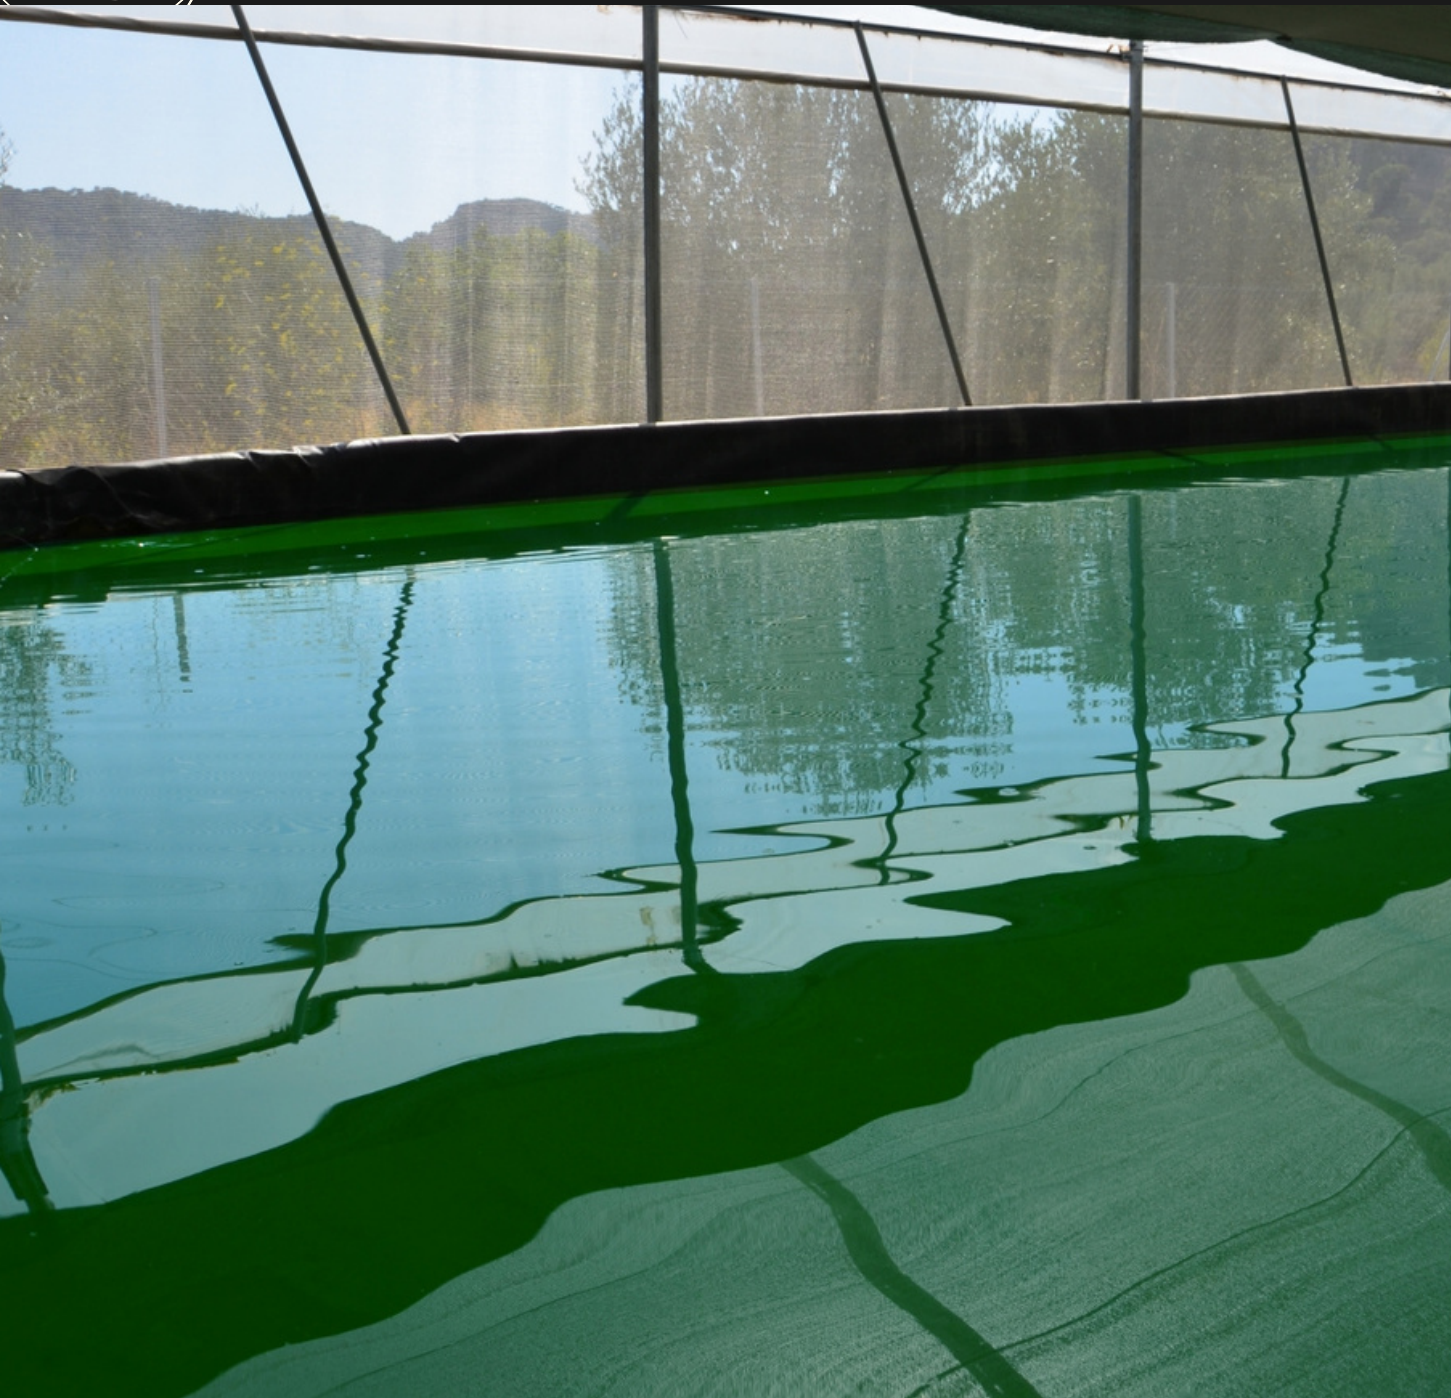

Ecospirulina was created in 2017 with the intention of properly feeding the world's population with unlimited resources with spirulina, since it can be grown in almost every where in the world. This culture requires very few resources compared to the production of other foods, this makes it very sustainable and has a high nutritional value.

They also work with chlorella

Creator of the company,
Nicolás Mazurier

WHERE DO THEY CULTIVATE?

The algae are cultivate in the Sierra Calderona Natural Park with the aim of maintaining the sustainability of the culture on the environment and having good quality of spirulina.

PRODUCTS

All their products are 100% organic and in addition to working with spirulina, they also work with chlorella and other algae such as wakame and kombu.

**NOODLES OR
COMPRESSED**

PHYCOCYANIN

JAM

PROPERTIES OF SPIRULINA

- Complements diets: vegetarian, weight loss and athletes.
- Reduces the effects of anemia because of iron deficiency, stress, and fatigue.
- Strengthens the immune system and after hard treatments
- Helps regulate cholesterol and diabetes.
- Relieves menstrual pain and menopause.
- Strengthens the shine of hair, nails, and skin elasticity.
